EF1

SPEED FRAME

A preassembled external fixator frame empowering reduction and reduction maintenance.

EXTERNAL FIXATION

SELF-CONTAINED. MODULAR. VERSATILE.

A preassembled external fixator frame, the EF1 Speed Frame allows for achieving and maintaining reduction in all three cardinal planes. The system's modularity enables placement of adjunct fixation devices for static or dynamic correction.

FEATURES & BENEFITS

The EF1 Speed Frame System can be used as a reduction device for initial fractures or in difficult or challenging clinical situations. The unique compression/distraction struts assist in fracture reduction and deformity correction.

This system allows for a high degree of angular correction and can also be used in a minimally invasive fashion.
